Landscape with `pandoc-latex-environment` and `pdflscape`

This example illustrates how the `pandoc-latex-environments` filter can be used to generate a `landscape` environment (from the `pdflscape` package) for presenting a whole page in landscape format while the rest of the document will be in portrait format.

```
::: landscape
This page will be in landscape format. It is usually used for large
   images or tables.

![Nam liber tempor cum soluta nobis mazim placerat facer.](image.png)
:::
```

This page will be in landscape format. It is usually used for large images or tables.

Figure 1: Nam liber tempor cum soluta nobis mazim placerat facer.
